

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently amended) A display equipment for displaying the characteristics of a body including the quantities of the bone, the water and/or the ~~muscular~~ muscle of the body, the display equipment comprising:

a belt including a plurality of electrodes in contact to the surface of the body;
means for measuring the impedance of the body by feeding a measuring current through said plurality of the electrodes into the body;

means for putting the personal information₁ such as male or female, age, height, body weight, or length around the wrist₁ ~~length around the~~ or hand of the body to be measured₁ into the display equipment;

means for calculating each approximate value of ~~the~~ bone weight, ~~the~~ water weight₁ and/or muscular weight of the body on the basis of the measured impedance ~~as measured~~ and said personal information;

means for judging the somatotypes of the body₁ which are classified on the basis of the correlations between the approximate value values as calculated and the body weight; and

a display for indicating the somatotype as judged by said judging means.

2. (Original) The display equipment for displaying the characteristics as set forth in claim 1,

wherein said personal information include at least male or female and the age, and the combination thereof.

3. (Original) The display equipment for displaying the characteristics as set forth in claim 1 or 2,

wherein said display equipment includes a memory of recording the bone weight, the water weight and/or the muscular weight of the body, which have been calculated on the basis of the impedance as measured, and said personal information, and further, a display of indicating sequentially the data as calculated.

4. (Canceled)

5. (Previously presented) The display equipment for displaying the characteristics as set forth in claim 1 or 2,

wherein the equipment can feed a pulsed current through said plurality of electrodes into the body, so as to treat the body.

6. (Previously presented) The display equipment for displaying the characteristics as set forth in claim 3,

wherein the equipment can feed a pulsed current through said plurality of electrodes into the body, so as to treat the body.
